

Chavant *Le Beau Touché*

Le Beau Touché is a sulphur free modeling clay with extraordinary smoothness and adhesive qualities allowing it to stick to basically any armature material. Le Beau Touché formulas hold very good detail, carve and shape easily, have tremendous flexibility and will not dry or crack. These clays may feel slightly firm in the original extruded blocks but slicing off small amounts will make it very manageable. The smallest amount of heat, just friction from rubbing it in your hands, will soften the original Le Beau Touché. Using small amounts of citrus-based solvents, Avon's Skin-so-Soft, lighter fluid, latex paint removers, turpentine or mineral spirits as a lubricant on the surface of the clay will help to attain an exceptionally smooth surface.
