Directions:

Line your work area with newspaper before beginning the process. Diffuser base oil, if spilt, will damage bench tops.

1. Measure the volume of the diffuser bottle by filling it with water until $\frac{3}{4}$ full and pour the water into a measuring jug. This is the volume of the bottle.
In this kit, the **volume of the diffuser bottle** is 200ml when full. The bottle when $\frac{3}{4}$ full is 150ml.
2. Using the **measuring cup** provided, measure 24ml of **the fragrance**, pour it into the **measuring jug**, and mix with the **stick** for at least 30 seconds. Use between 15 and 20% (based on the volume of the bottle) of fragrance oil.
3. Pour the blend (**diffuser base oil + fragrance**) into **the diffuser bottle** until it is $\frac{3}{4}$ full (126ml base oil). DO NOT OVERFILL THE BOTTLE.
4. Clean up any liquid dripping onto the diffuser bottle with a **paper towel**.
5. Paste **the warning label** on the base of the diffuser bottle.
6. Insert the **cap** into the **bottle** for storage. Ensure the cap is tight to prevent spillage.
7. When ready to be used, remove **cap**, and insert **5 to 10 reed diffuser sticks** into the bottle.
8. Once **reed diffuser sticks** soak up the oil, fragrance will be dispersed.
9. Flip **reed diffuser sticks** once a week.
10. Change **reed diffuser sticks** every 3 to 6 months.

- *Please note that these instructions are generic.*
- *Never fill diffuser bottle to the full capacity.*
- *Use diffuser oil with caution as if spilled, will damage benchtops, tables, and surfaces.*
