HALF ED H2.0

PREMIUM MALE HALF HEAD ARMATURE (LIFE SIZE)

Description: Latex Mask Making just got a facelift. Introducing **Half Ed H2.0**, the world's first water fillable half head sculpting form from The Monster Makers. The Half Ed is a super light weight sculpting form designed to be the ultimate base for sculpting half masks. Completely reengineered and reimagined, Half Ed H.20 is composed of a special, high-density plastic that can withstand the rigors of mold making and years of continued use with little to no wear. Not only is the Half Ed endlessly reusable, but Mold Making has never been easier.

PRODUCT FEATURES

RAD (Radiant Assisted Demold) Technology™ provides an easy, built in clay release system which dramatically aides in the demolding process for artists and mask makers using wax based clay mediums. Each RAD enhanced headform becomes, in effect, a hot water vessel which efficiently transfers radiant heat from inside the form to the surrounding clay causing a softening effect within the mold. Molds made over RAD enhanced forms can be demolded rapidly and without difficulty, resulting in a greatly improved mold-making experience. When you are ready to demold, simply turn the mold over with the bottom side up, unscrew the included inset bottle cap and fill the head form with hot water. Within minutes, radiant heat will begin to penetrate the clay and into the mold for the easiest demolding experience you've ever had. Say goodbye to broken or stuck head forms!

SPECIFICATIONS

The Ed Head measures 16.5" L x 12" W x 7.5" H. Weighs approximately 5lbs

Each headform is supplied with a black plastic cap to seal the bottom spout.
