

## Snowflake Wax

### TECHNICAL DATA SHEET

#### DESCRIPTION:

Orchid Snowflake wax is a 100% natural vegetable wax used for the purpose of container candles with a unique snowflake, crystal frost affect. This hardy wax has exceptional glass adhesion. Use in clear jars. Orchid Wax Snowflake is best used with colour to enhance the snowflake crystal pattern of the wax.

#### HEATING:

Use water base to melt wax in steel container (double boiler, do not place container on direct heat) and stir continuously until wax is completely melted. Add colours and stir until colour is completely dissolved. Ensure slow cooling to achieve the snowflake crystal pattern. Heating temperature 85-90°C. pouring temperature 85°C.

Do not blend with paraffin or other waxes. Wicks, dyes and fragrances used in paraffin candles may give different results when used with vegetable wax blends. Seek advice from your supplier to obtain suitable colorants and additives for your candle's formula. Store in a cool, dry place and away from direct light.

#### TYPICAL PROPERTIES:

Heating Temperature: 85-90°C

Pouring Temperature: 85°C

#### NOTE:

Slow cooling is needed to achieve a crystal affect.
